

The Averhealth Laboratory

Averhealth is a lab-based drug-testing company delivering the industry's most accurate and timely testing to ensure clients with Substance Use Disorder (SUD) stay on the road to recovery.

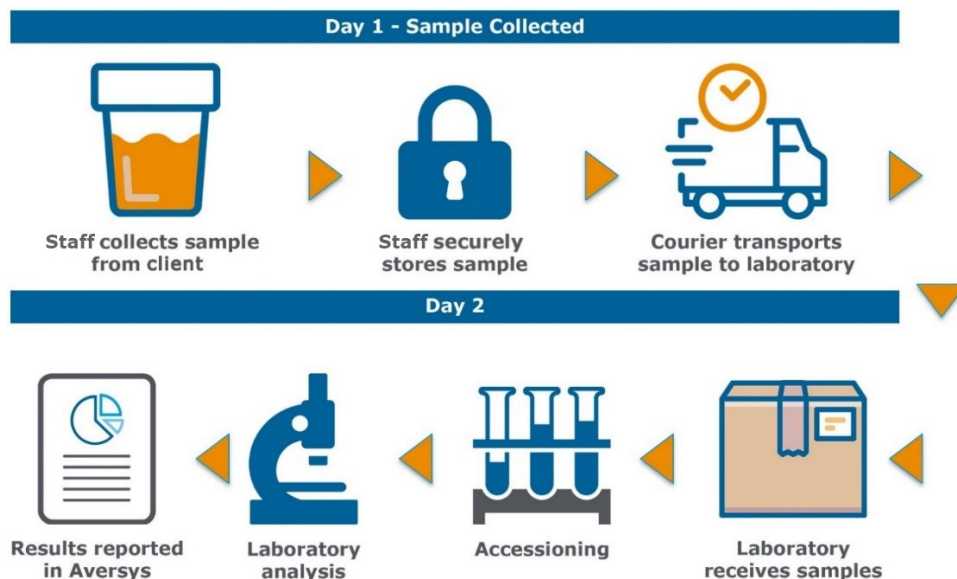

Our laboratory in St. Louis, Mo., led by a Ph.D. toxicologist, tests across a variety of specimen types, including urine, oral fluid and hair based on use case, desired detection window, range of detectable substances, test frequency and substance combination.

Averhealth's lab uses an Olympus AU5400 Chemistry Immuno Analyzer for testing, the same instruments used by large hospital systems.

TURNAROUND TIME

Rapid results mean rapid interventions – critical in recovery. That's why Averhealth focuses on quick turnaround time for testing results. After samples are collected at one of our nationwide locations, they are delivered to our laboratory via priority overnight delivery. Our laboratory's location in the middle of the country makes it easy for samples to arrive and results reported the next business day after testing.

While other providers might rely on instant testing because they believe laboratory testing would take too long, our rapid turnaround time ensures you get accuracy and efficiency. With Averhealth, you can have it all.

ACCREDITATIONS

Our lab is accredited by the College of American Pathologists-Forensic Drug Testing (CAP-FDT), ensuring the accuracy of our results and adherence to industry-leading practices. To pass this 21-discipline certification checklist, our lab has repeatedly demonstrated proficiency and commitment to the highest standards.

As a result, Averhealth is **one of only 30 US laboratories with a CAP-FDT certification**, illustrating that our focus is on forensic toxicology specifically applicable to the needs of our customers. In addition to CAP-FDT, Averhealth’s lab is certified by the US Department of Health and Human Services Clinical Laboratory Improvements Amendment (CLIA) and the Drug Enforcement Agency (DEA).

Operating a high-quality, forensically focused lab is more than reporting accurate results. It’s about having the right people, physical requirements, quality management and administrative details to earn the trust of customers, and our accreditations ensure that Averhealth is fulfilling these high standards.
